YOUR PACKAGING PARTNER

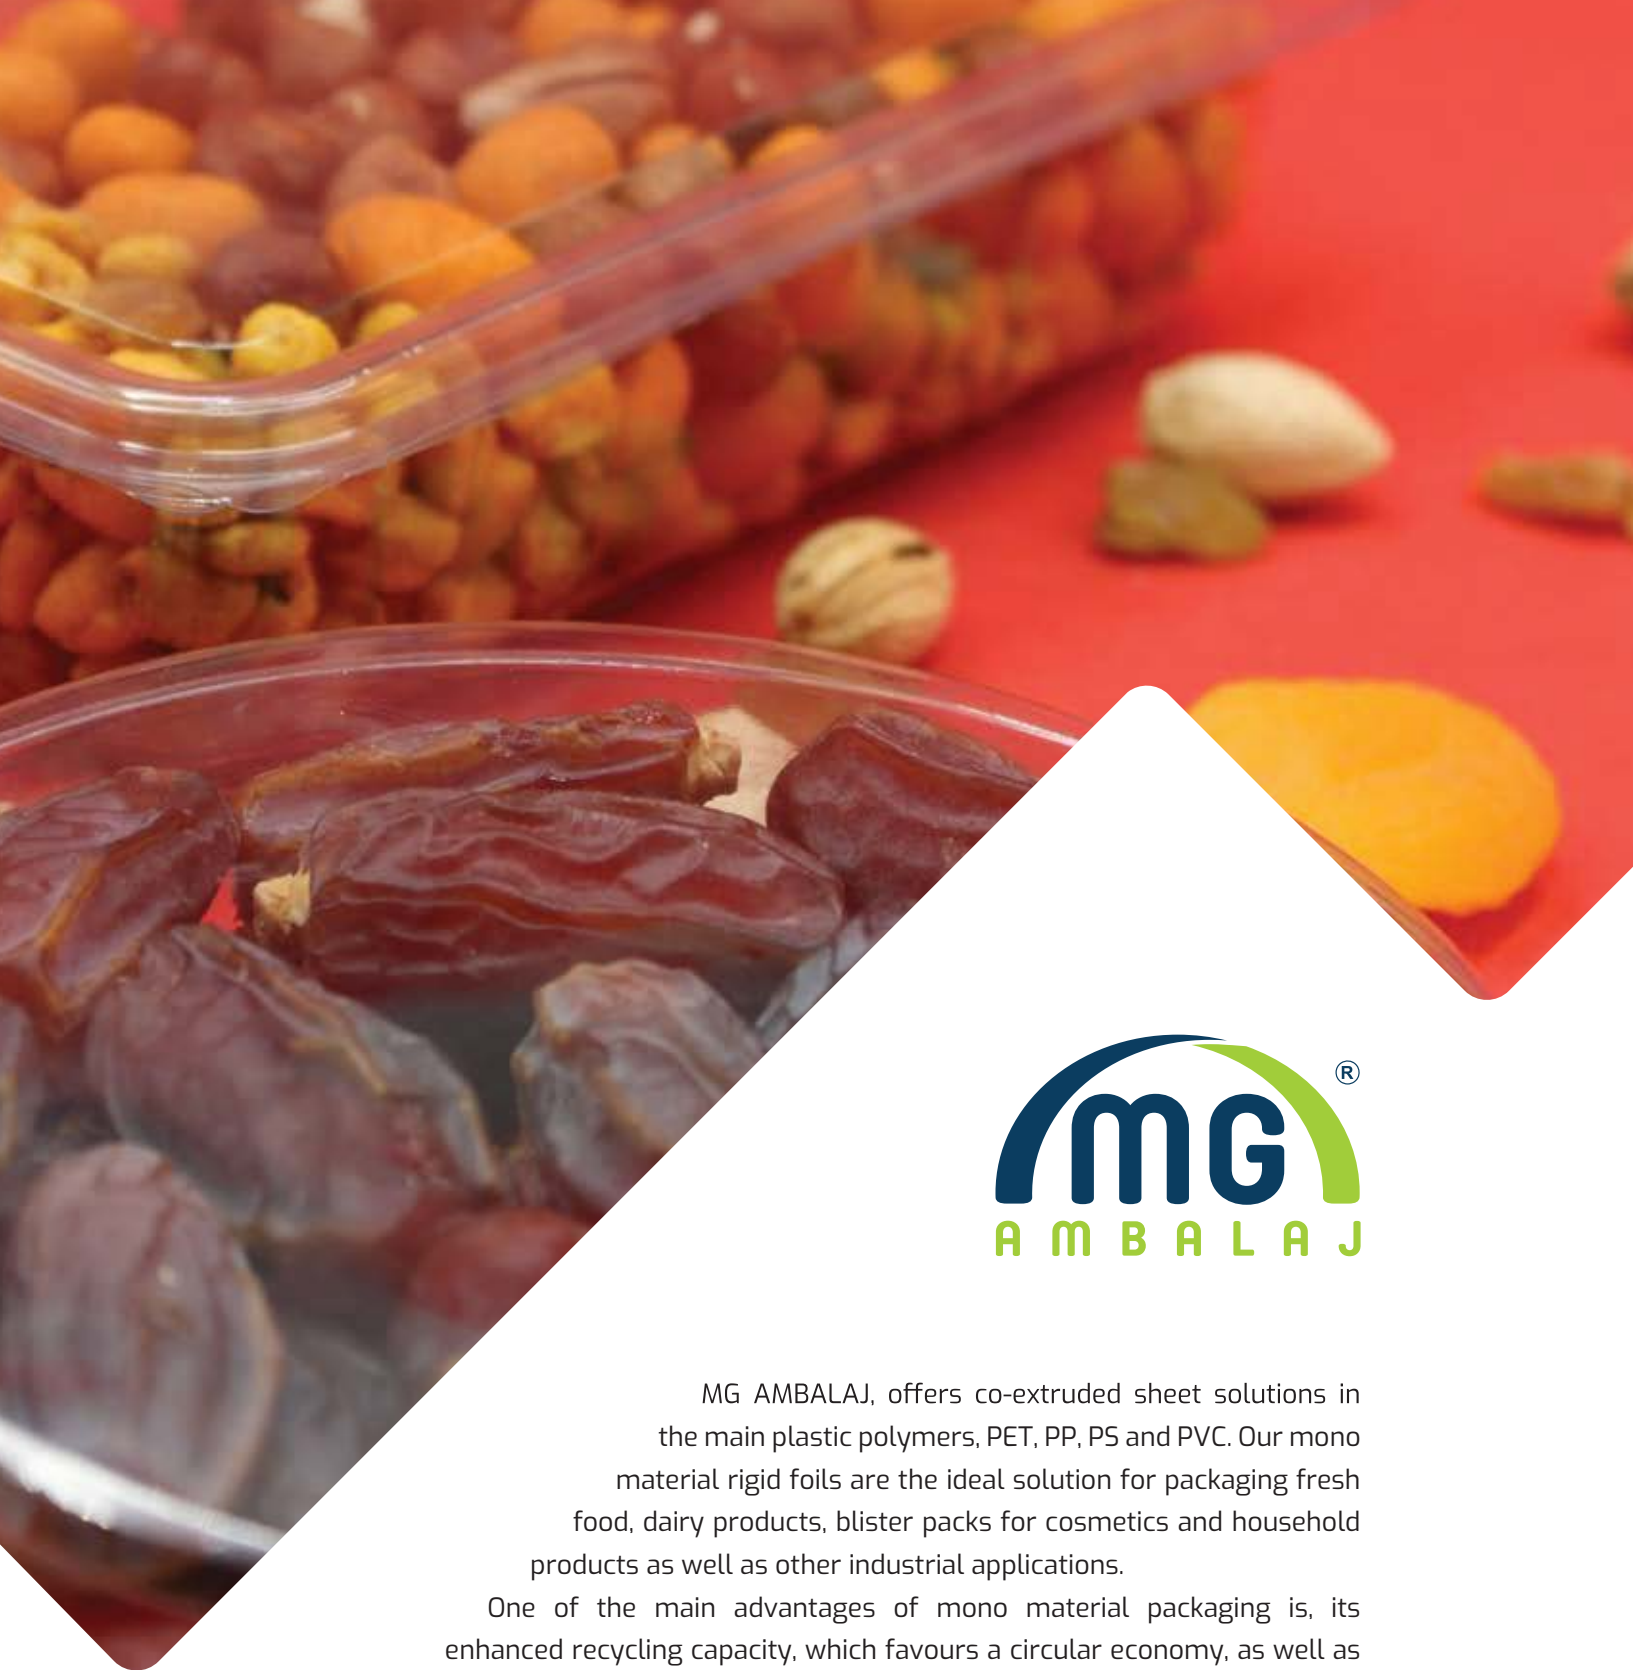

mgambalaj.com.tr

all types of rigid foil

MG AMBALAJ, offers co-extruded sheet solutions in the main plastic polymers, PET, PP, PS and PVC. Our mono material rigid foils are the ideal solution for packaging fresh food, dairy products, blister packs for cosmetics and household products as well as other industrial applications.

One of the main advantages of mono material packaging is, its enhanced recycling capacity, which favours a circular economy, as well as requiring less energy consumption to make it and which optimizes production processes.

We use anti-block, silicone coating and anti-fog materials in our food and non-food packaging, which we produce with special formula options for thermoforming and FFS machines and offer special recycled products with high transparency.

As your solution partner, MG AMBALAJ can also provide you laminated sheets such as APET//PE, APET/EVOH/PE, PVC//PE sheets and we offer PP/EVOH/PP and PP/EVOH/PE foils as barrier product options.

PET (Polyethylene Terephthalate)

PET is the most common thermoplastic polymer resin of the polyester family.

It is mostly used in thermoforming or FFS applications in food and non-food packaging.

PET sheet is a clear transparent plastic that is extremely suitable for advertising

applications. With properties such as chemical resistance, fire resistance and great high impact resistance, it is a commonly used material. The possibilities in both mechanical and thermal operations are very good. Since it is known as the product closest to the glass packaging, PET sheet is the most preferred plastic in food industry such as delicatessen products, pastry trays, ready meal cups and fruit containers which show the product inside in the best way.

Our PET Sheet Options We Offer for You:

- PET Foil
- PET PE Laminated Foil (PET/PE)
- PET EVOH PE Laminated Foil (PET/EVOH/PE)
- PET Antifog Foil
- PET Metallized Foil

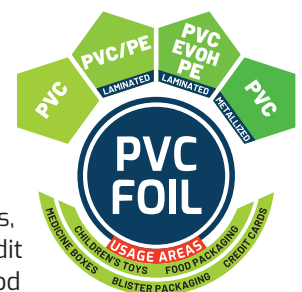

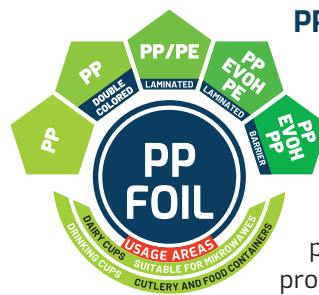

PVC (Polyvinyl Chloride)

PVC is an important thermoplastic material used in a wide variety of applications and products. PVC sheet is used in a wide area from PVC blister packaging to PVC medicine boxes, from roofing membranes to credit cards, from children's toys to food packaging. The material has very good ink adhesion, making it easy to print. It also has good resistance to flames and chemicals.

Our PVC Sheet Options We Offer for You:

- PVC Foil
- PVC PE Laminated Foil (PVC/PE)
- PVC EVOH PE Laminated Foil (PVC/EVOH/PE)
- PVC Metallized Foil

PP (Polypropylene)

PP, after polyethylene, is the second most widely produced thermoplastic polymer and is often used in packaging and labelling. PP is the lowest density commodity plastic. PP sheets used in the production of drinking cups, cutlery and food containers which offer packaging options suitable for microwaves. PP is often chosen due to its low specific weight and resistance to high temperatures (microwave). As a mix of homo – and copolymer, it can also be used for deep-freeze applications. The material is resistant to fats, oils and various chemicals.

Our PP Sheet Options We Offer for You:

- PP Foil
- PP PE Laminated Foil (PP/PE)
- PP EVOH PE Laminated Foil (PP/EVOH/PE)

PS

PS (Polystyrene)

PS is a hard and rather brittle material that is a clear color and is usually colored with white masterbatch. PS is one of the most widely used plastics.

Usage areas include protective packaging, household appliances, food packaging such as disposable cutlery, portion packs,

dairy products like yoghurt containers, ayran cups, pudding and dessert cups.

PS Sheet Options We Offer for You:

- PS Foil
- PS Double Colored Foil
- Coated PS Foil

Today MG Ambalaj is;

- Leading international and regional brands in Türkiye and all over the World.
- Manufacturing all types of packaging sheets for thermoforming products.
- Exporting more than 20 countries from USA and Europe to Africa and Middle East countries.

Why MG Ambalaj?

We Make a Difference with;

- Excellent clarity and perfect thermoforming ability.
- Consistency and Sustainability in Product Quality.
- Food Contact Products (FCMs) produced with Eco - Friendly materials with the structure of A/B/A
- For all your questions and requirements 24/7 Customer Service.

Operations & Logistics

CRM and Logistic Departments of MG Ambalaj are unified to strengthen and improve capabilities, effectiveness and the efficiency of the function. We do this with the aim and desire to improve our service.

24/7 Customer Service

As MG Ambalaj, we recognize the value of exemplary customer service and on-time delivery. Flexibility and customer connectivity are our hallmarks. A guarantee that you have teamed up with the right partner.

More than 400 domestic and foreign customers

Western Europe

- UK
- Spain
- Italy
- Netherlands
- France
- Scandinavia

Eastern Europe

- Poland
- Ukraine
- Bulgaria
- Romania
- Serbia
- Austria

Middle East / Africa

- Iraq
- S. Arabia
- U.A.E
- Tunisia
- Libya
- Algeria

America

- USA
- Chile
- Brasil

Export Destinations: More than 20 countries

Environmental and Safety Commitments

We believe that managing environmental impact is an important factor for our customers' packaging strategy. Our materials, especially from PET raw materials, offer a greatly reduced carbon footprint when compared to a glass jar or metal can. Minimizing the environmental carbon footprint, producing by using recycled content and reducing the energy used to realize safe and accessible recycling solutions are among our primary goals.

For us, sustainability is a discipline and the only key to success. For this reason, when we supply a new product to our customer, we approach with a shared sense of responsibility. We believe that every single product should serve our customers' expectations and this should be done efficiently and competitively.
